## Summary

MSc AI & Machine Learning candidate at Gujarat University with hands-on experience building full-stack AI applications, predictive models, and mobile apps. Skilled in NLP, deep learning, and retrieval-augmented generation (RAG) systems. Passionate about deploying end-to-end machine learning solutions that solve real-world problems.

## Technical Skills

|                         |                                                                                                                                           |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| AI/ML                   | Natural Language Processing, Deep Learning, Reinforcement Learning, Scikit-learn, Pandas, NumPy, OpenCV, Matplotlib, LLM APIs, RAG system |
| Tools                   | Firebase, GitHub, VS Code, MySQL, Android Studio                                                                                          |
| Web & Mobile Frameworks | React-Native, FastAPI, HTML, Tailwind CSS, Kivy                                                                                           |
| Programming Languages   | Python, C, C++, C#, Java, PHP                                                                                                             |

## Education

|                                                                                                                                                             |             |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>Master Of Science – Artificial Intelligence &amp; Machine Learning</b><br>Department Of Computer Science, Gujarat University – Ahmedabad, Gujarat, India | 2024 – 2026 |
| <b>Bachelor Of Science (IT) – Software Development</b><br>Department Of Animation (Web and Mobile), Gujarat University – Ahmedabad, Gujarat, India          | 2021 – 2024 |

## Projects

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                      |

| <b>CricPredict – IPL Analytics Platform</b><br><i>Python, FastAPI, HTML/Tailwind, XGBoost, NLP, FAISS, Google Gemini API</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="#">Live</a> |
| <ul style="list-style-type: none"><li>Engineered a full-stack AI-powered web application for IPL match prediction and advanced cricket analytics using historical data from 2008–2025.</li><li>Trained XGBoost classification and regression models achieving accurate win-probability and final-score predictions.</li><li>Designed a Retrieval-Augmented Generation (RAG) system by combining Google Gemini API with a FAISS vector database for fast semantic search.</li><li>Built scalable REST APIs with FastAPI for model inference, data retrieval, and chatbot interaction; deployed a responsive Tailwind CSS UI for real-time visualization.</li></ul> |                      |
| <b>Raahi Dost – Travel Recommendation System</b><br><i>Python, React Native, Pandas, Firebase Authentication</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="#">Live</a> |
| <ul style="list-style-type: none"><li>Built a cross-platform mobile application recommending destinations based on user budget, preferences, and GPS location.</li><li>Implemented budget-aware ranking logic combining travel distance (Haversine formula), estimated cost, and user-defined constraints.</li><li>Delivered a clean, intuitive React Native UI with Firebase-backed authentication for a seamless user experience.</li></ul>                                                                                                                                                                                                                     |                      |

### **Pluto – Student Assistant Chatbot**

*Python, Kivy, Firebase, Custom NLP Algorithms*

- ▶ Developed a real-time AI chatbot assisting students with academic queries using custom NLP techniques: fuzzy matching, spell correction, and intent detection.
- ▶ Designed multi-step conversational flows with custom state management for coherent, context-aware interactions

### **Talk More – Chatting Application**

*Java, XML, Android Studio, Firebase Authentication, Firebase Database*

- ▶ Developed a real-time messaging app using Java and Firebase, enabling users to register, log in, and exchange messages instantly.
- ▶ Implemented Firebase Authentication for secure login and Firebase Realtime Database for storing and retrieving chat data.

### **VidZen – Short Video Application**

*Java, XML, Android Studio, Firebase Database*

- ▶ Developed an Android app for discovering and sharing short videos, with real-time data handling using Firebase.
- ▶ Focused on smooth user experience and responsive UI.

### **Expensify – Trip Expense Manage App**

*React-Native, Firebase Database, TypeScript, CSS*

- ▶ Built a React Native app to track and summarize trip expenses.
- ▶ Used Firebase for secure data storage and TypeScript for scalable, maintainable code.

## **Certifications**

---

- ▶ Google Cloud - Introduction to Generative AI >> [Certificate of Completion](#)
- ▶ IBM - Introduction to Artificial Intelligence
- ▶ Python Programmer >> [Certificate of Completion](#)
- ▶ GenAI Powered Data Analytics >> [Certificate of Completion](#)
- ▶ Blossom Institute - Communication Skill Training
